WeSupply

EASY AND RELIABLE SUPPLIER MANAGEMENT

Supply chain in focus

Reliable and structured supply chain management concerning aspects of sustainability, risk management and reputational preservation is of growing significance for companies. Conformity with standards relating to human rights and working conditions at subcontractors play a significant role in customers' codes of conduct, and are crucial for a company's reputation. Stakeholders are no longer just assessing their own company's performance, but also consider responsible dealings with suppliers and the application of international standards.

Shaping supplier relationships with long-term vision

WeSustain supports the selection, evaluation and development of suppliers through its WeSupply software module. Flexibly-structured questionnaires can be sent directly from the software to the relevant suppliers. These questionnaires contain a link and password to provide limited access to the software, which enables external participants to enter the required data and information. The information gathered is automatically checked for plausibility and completeness, and is collected centrally. The status and progress of a supplier query is now clearly shown at all times. The data can also be used and administrated for a standardized supplier analysis. Moreover, scoring options enable a reliable evaluation and risk assessment of suppliers.

WeSustain Enterprise Sustainability Management (ESM)

As not all suppliers can access a web browser at all times, it is also possible to complete the questionnaires offline using *WeApp*. The data thereby acquired is automatically exported into the software.

Responsible CSR management goes beyond your company boundaries. WeSupply helps to investigate and evaluate suppliers in a structured manner - for increased transparency and active risk management in your supply chain.

>> **INSPECT AND SHAPE THE ENTIRE SUPPLY CHAIN**
>> **SELECT, EVALUATE AND MANAGE SUPPLIERS**
>> **FLEXIBLE QUESTIONNAIRES FOR STRUCTURED DATA COLLECTION**
>> **DIRECTLY COLLABORATE WITH SUPPLIERS**
>> **RELIABLE EVALUATIONS AND RISK ASSESSMENTS**

Example of a customer application:

WeSustain software for the "Partnership for Sustainable Textiles", under the direction of the German Federal Ministry for Economic Cooperation and Development.
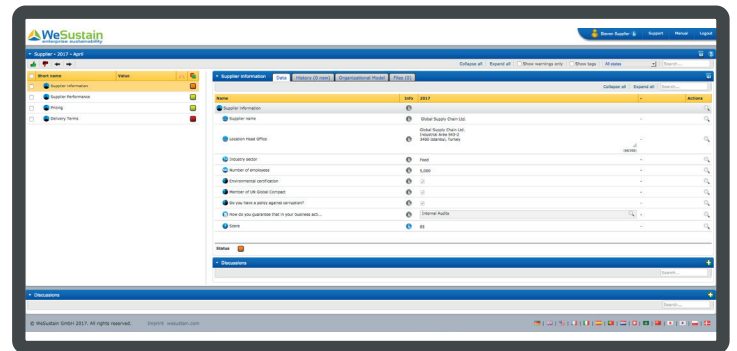

More than 180 companies from the textile industry teamed up to improve the employment conditions at suppliers in developing countries.

Based on an evaluation formula, self-disclosure from the suppliers and on-site audits, a structured supplier evaluation is conducted. The derived improvement measures can be displayed in "road maps". These include one-off measures by the supplier, such as training or construction measures, but also structural measures to optimize the supplier portfolio.

WeApp: *mobile application for stakeholder communication*
